## High Water Crossing Work Sheet

02/08 Rev. 1.0

The following diagrams illustrate typical high water warning systems using solar flashers and sensor stations. Systems can be self-contained with the solar flashers and sensor equipment all at one point or distributed using radio links in advance to connect the different points in the system.

Please review the suggested layouts, determine the typical number and duration of activations per year, and determine the size, number and color of lamps to be used.

Please follow up by calling 480.449.0222 (MST) or email Solar Traffic Controls at [info@solar-traffic-controls.com](mailto:info@solar-traffic-controls.com). Thank you.
